

SECURITY, CONVENIENCE and FLEXIBILITY AT YOUR DOOR

SECCOR® Security Fittings

HIGH SECURITY:

All security-related components are located on the inside of the door – protected from the outside by a hardened-steel armoured plate. SECCOR security fittings are tested and have been awarded the VdS (Association of German Underwriters) maximum-security rating.

HIGH FLEXIBILITY:

Simply enter your personal code on the keypad and the door can be unlocked. You can choose between 4 and 8 digits. Each system stores up to 255 different authorisations at the same time. You can change any of the 255 individual codes at any time you like by the help of the programming key.

EASY INSTALLATION:

SECCOR security fittings fit virtually any door equipped with an Euro-norm-profile lock – even doors with multiple locking. The incorporated battery means that no door wiring is required.

NO DOOR WIRING:

A commercially available lithium battery ensures smooth operation up to 10 years or 40.000 openings. The incorporated battery monitor indicates when you need to change the battery in plenty of time. It also ensures, that you can still open your door even with an almost flat battery. All programmed authorisations remain stored when you change the battery.

PERSONAL CODE OR PERSONAL KEY:

You can either open the door with your personal code or you use the SECCOR digital key. It's just as secure and convenient. Each key is unique. You can change any of the 255 different codes or digital keys at any time you like with the programming key.

ELEGANT DESIGN:

The SECCOR security fittings are available with a variety of finishes: brass, antique brass, stainless steel or matt nickel-plated.

There is no comparison to the security and comfort of SECCOR security fittings.
